

aleeke

aleeke came from vmbo into the havo-stream in 2016. i think he experienced it all as hard to fix and yes, the last two classes took him *three years*. but, and this must be emphasized, aleeke has worked very, very hard and his motivation was very, very strong. and all this pays off: although he needed a resit with his central exam, he finally made it. yes he really earned his havo diploma! we all wish him a great career in agriculture, starting with a study in that field in the united states.

the three other havo-graduates started havo-1 in 2014. that happens to be the year that i started myself as a math teacher at this school. i am proud that i may announce you these three graduates that had only one math teacher during their entire secondary school-career.

wytze

the first of these three is wytze. actually, you cannot miss him due to his length. very beloved therefore in the schoolbasketballteam on its trip to europe and also a well respected member of his class. together with aleeke, he is always in for a joke, but simultaneously he is very serious with his study. always well prepared, based on a thorough planning. let us wish him a successful follow up study in the maritime sector in the netherlands.

dejeanee

then we have dejeanee. i think i give a good summary of her study these years when i say "*she enjoyed the school period*". with not too much effort she easily came to a good exam-result. i am especially proud of her (*and wytze*) since they did together the "wiskunde d" (delta) program which give them an extra strong mathematical fundament in their follow up study. talking about that: dejeanee, all the best with your study for being a math teacher!

khadija

the final havo-graduate i want to present to you is khadija. she is a very special student. gifted with a good brain. a very hard worker and sometimes not very pleasant for her environment when things are not going according to her plan. nevertheless, by strong focussing and working hard, she has performed *extremely* good! one 7, one 9, for the rest just 8. so, the mean result is an 8 which gives the diplom a special label: *cum laude*! congratulations and lots of success with the next step on your way to university, which is for the coming schoolyear: vwo on bonaire.
